Sq. Feet of Building
Area Monitored

Our Core Services:

Energy

At Group14 we inspire better buildings that are smarter, healthier, and more cost-efficient through innovative energy solutions.

- Energy Modeling & Consulting
- Energy Audits
- BAS Upgrade Design
- Measurement & Verification

Sustainability

Our sustainability solutions decrease environmental footprint, maximize savings, and enhance occupant wellbeing.

- Green Building Certification
- Corporate Social Responsibility Assessment
- Life-Cycle Assessment
- Social Impact & Health

Commissioning

We help building owners protect and grow their investments by ensuring that all building systems are installed and operating properly.

- MEP & Special Systems Commissioning
- Retro-commissioning
- Monitoring Based Commissioning (SkySpark)
- Enclosure Commissioning

DPS STUDENTS FOR CLIMATE ACTION

CLEAN ENERGY

Use 100% clean electricity
by 2030 in accordance
with Denver's [100%
Renewable Electricity
Action Plan](#)

[Read More >](#)

DECREASE CARBON EMISSIONS

Reduce overall greenhouse
gas emissions by at least 90%
of the levels of district-wide
greenhouse gas emissions
that existed in 2010 by 2050,
in line with [Colorado's
Climate Action Plan](#)

[Read More >](#)

ENVIRONMENTAL JUSTICE

Prioritize sustainability
actions in schools and
communities facing
greater inequity and/or
environmental injustice

[Read More >](#)

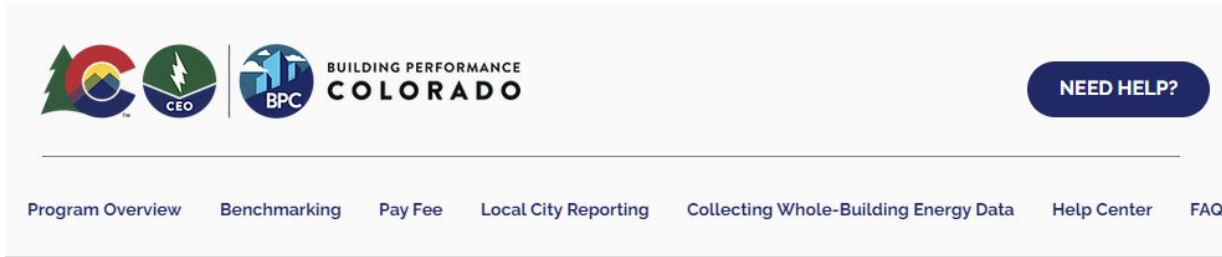

State of Colorado - GHG Road Map

- HB19-1261 Climate Action Plan To Reduce Pollution
- Goal of 90% below 2005 levels by 2050

[Colorado Energy Office GHG Pollution Reduction Roadmap](#)

State of Colorado - Building Performance

BUILDING PERFORMANCE COLORADO

<https://www.buildingperformanceco.com/>

Goals:

7% emissions reduction by 2026

20% emissions reduction by 2030

- House Bill 21-1286 “Energy Performance for Buildings” passed 6/8/21
- Benchmarking by 12/1/22
- Building Performance Standard (BPS) Task Force underway to determine performance requirements

Project Objective

City and County of Denver

Denver's Climate Goals

Denver aims to reduce greenhouse gas (GHG) emissions 65% by 2030!

Goal Year	GHG Emissions Reduction
2025	40%
2030	65%
2040	100%

[Denver Climate Action](#)

Renewable Energy

Goal: 100% Renewable Electricity by 2030

Denver as an electricity consumer is nested within Xcel Energy and the broader Colorado electric system. Denver's renewable vision is to enable a rapid and equitable transition to a 100% renewable electric system in Colorado. **By 2030, 100% of Denver's community-wide electricity use will contribute to this vision.**

Energize Denver - Building Ordinance

- Commercial & Multifamily buildings

[Energize Denver Hub](#)

[Energize Denver Task Force Recommendations](#)

POLICY #1: Performance Requirements

- 1) All large buildings > 25,000 sf: EUI Target
 - Compliance through annual benchmarking
- 2) All small buildings 5,000 sf – 25,000 sf: LED lighting or solar
 - One time submittal showing proof

POLICY #2: Renewable Heating and Cooling (Electrification)

- All commercial buildings, phased in by equipment type
- Partial electrification upon system replacement when cost effective
- Managed through building permits

Energize Denver - #1 Performance Requirements (>25,000 sq.ft.)

- 2030 Target for K-12 schools: **48 kBtu/sq.ft./yr**
- Track compliance through annual benchmarking - **2025, 2028, 2031**
- Solar fully credited to EUI - on site or off site

Denver Office of Climate Action, Sustainability & Resiliency (CASR)

Project Process

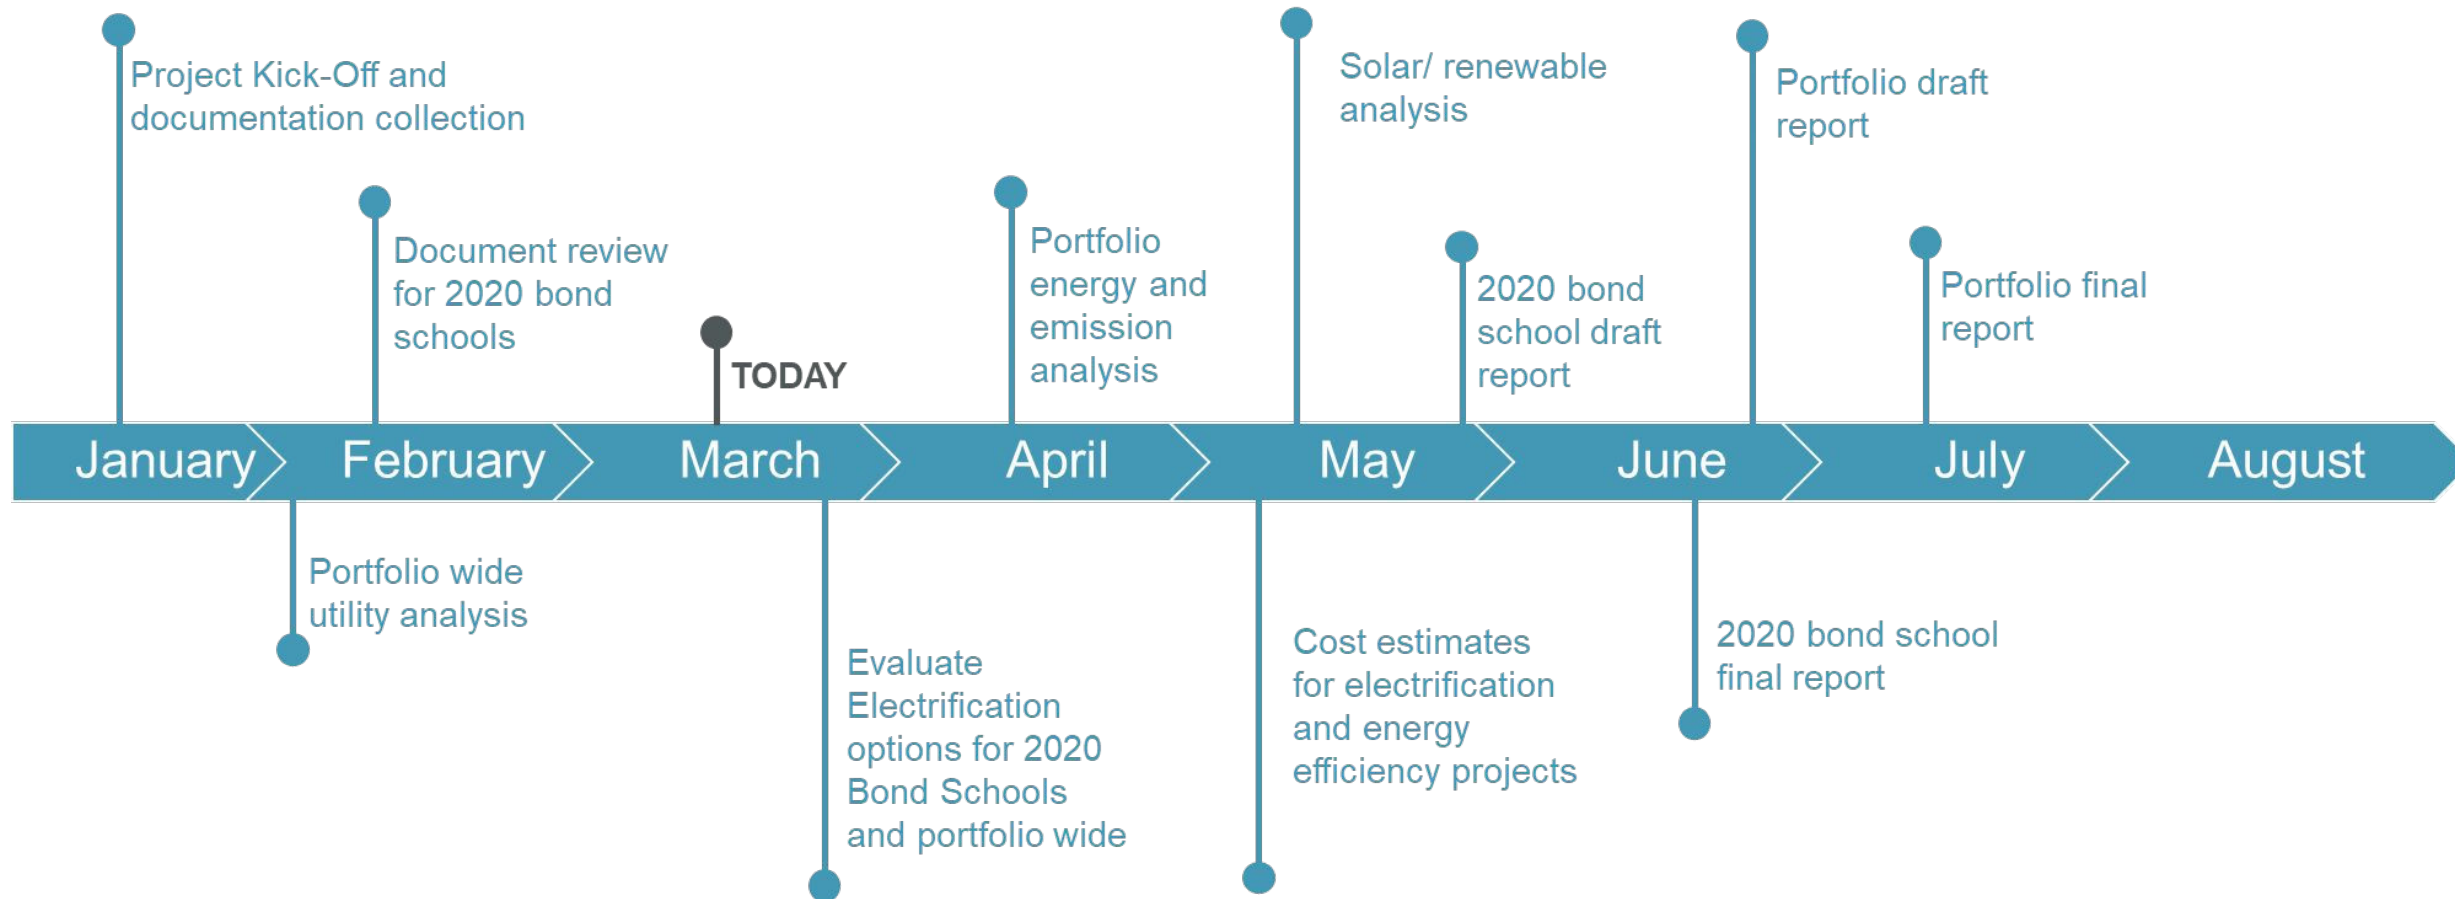

DPS Project - Financial Impact Assessment Scope

01	2020 Bond Electrification Evaluation	<ul style="list-style-type: none">• Consult on schools receiving new cooling or cooling upgrades• Recommend electrification, assess costs
02	2024 Bond Electrification and Energy Evaluation	<ul style="list-style-type: none">• Plan ahead for next bond round to include electrification• Include energy improvements to meet goals
03	Renewable Energy Assessment	<ul style="list-style-type: none">• Analyze gap to achieve 100% renewable energy by 2030 considering Xcel Energy targets• Determine options and costs for new solar
04	Portfolio Level Analysis	<ul style="list-style-type: none">• Evaluate historic energy use and emissions• Assess impacts and costs for efficiency, electrification, and renewables across DPS

Project Process

Financial Impact Assessment Timeline

Energy & Emissions

DPS Annual Energy in kBtus/yr

DPS Annual Energy Costs

Energy & Emissions

Xcel Energy Carbon Reduction Trajectory

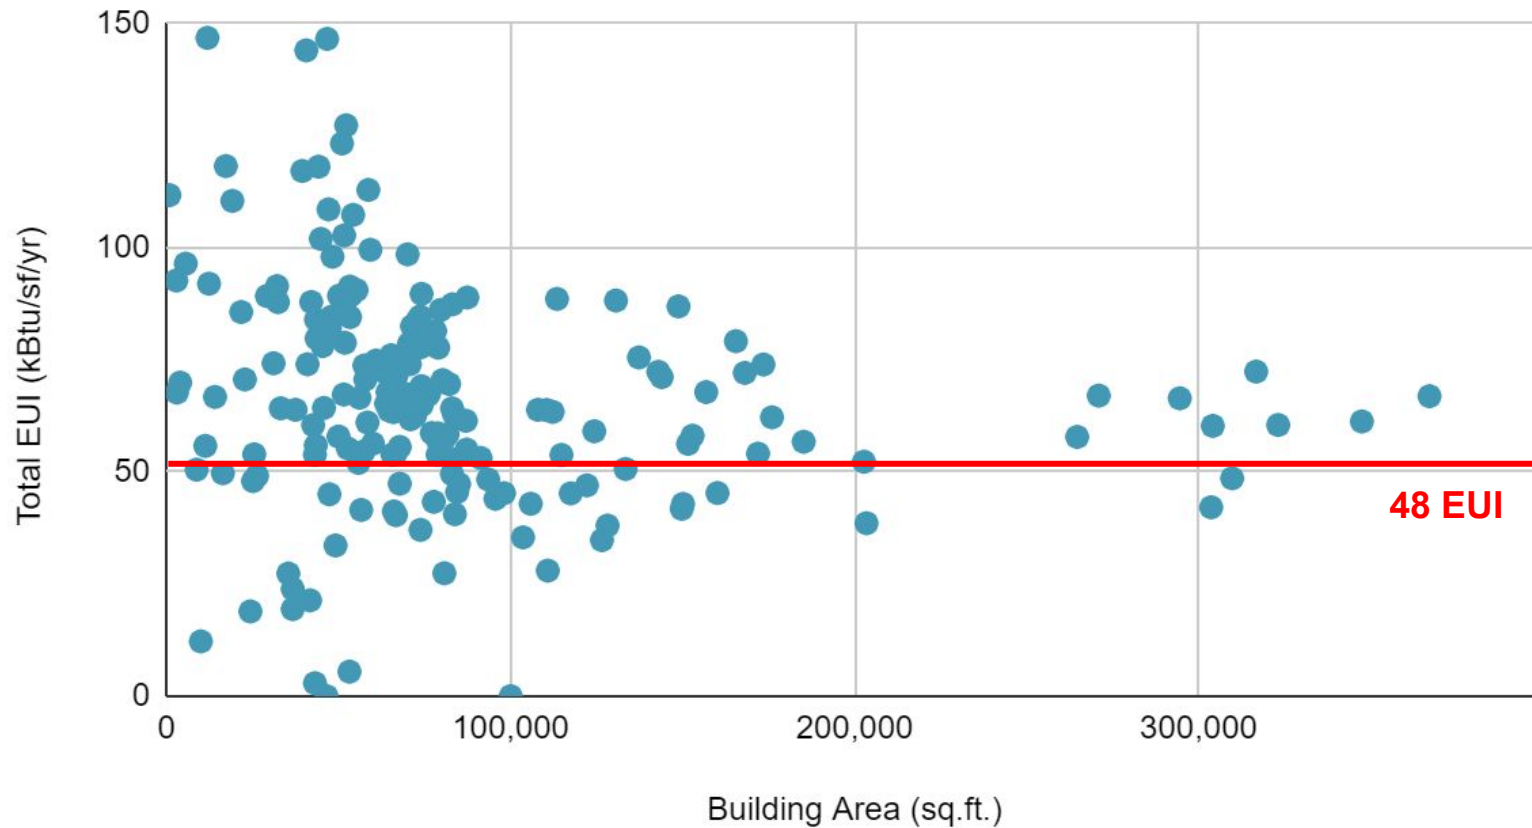

Figure 1: Our vision for the clean energy transition 2030 and 2050

DPS Total Emissions

Current EUIs at DPS

Total EUI (kBtu/sf/yr)

% of Schools the Currently Meet the EUI Target (48 kBtu/sf/yr for K-12 Schools)

Energy & Emissions

If a **48 EUI** can be achieved for all schools, it will save:

- **25%** of total energy use
- 252,102,568 kBtu/yr

Fuel Source	Approximate Energy Savings		Cost Savings (\$/yr)
Natural Gas Savings	1,260,513	therms/yr	\$510,245
Electricity Savings	36,932,694	kWh/yr	\$3,673,582

How to achieve savings?

- LED lighting already done across the district
- Low cost measures: Controls upgrades and retro-commissioning
- Capital upgrades: Mechanical and controls projects identified in the Facilities Conditions Assessments
- Install heat pumps at time of equipment replacement (~300% efficient)

Electrification

Electrification Drivers

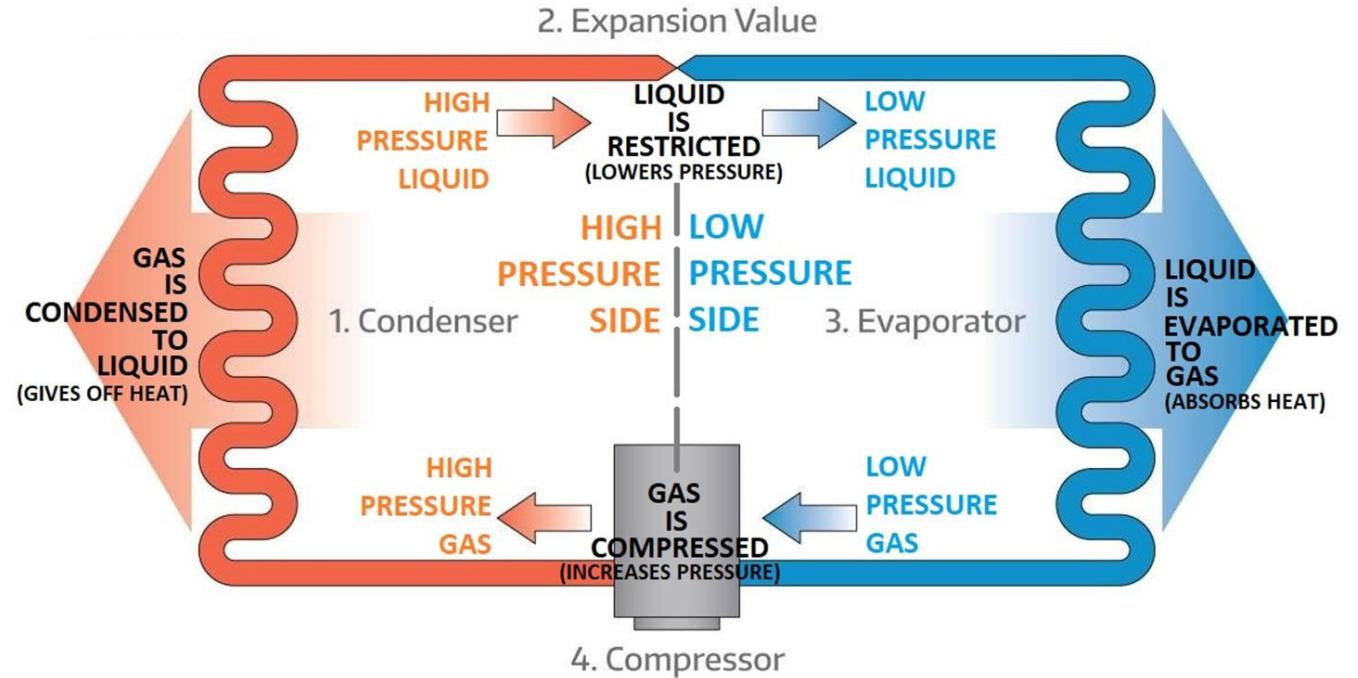

- Electricity generated by renewable energy is the only path to achieve aggressive goals for carbon reduction
- Xcel Energy has a goal of 80% carbon reduction by 2030
- Heat pump technology has advanced with more air source options for cold climates

[Xcel Energy's Carbon Report](#)

2020 bond projects being evaluated

- New mechanical cooling being added for 9 schools
- Roof-top Unit replacement planned for 5 schools

[This Photo](#) by Unknown Author is licensed under [CC BY-NC-ND](#)

Rooftop Unit (RTU) Replacement

- Include a heat pump in lieu of DX cooling only
- Similar equipment first cost
- Natural gas can remain as backup
 - Reduce peak electrical cost
 - Minimize or eliminate the need to increase the electrical supply
- Similar operating costs with high efficiency heat pump

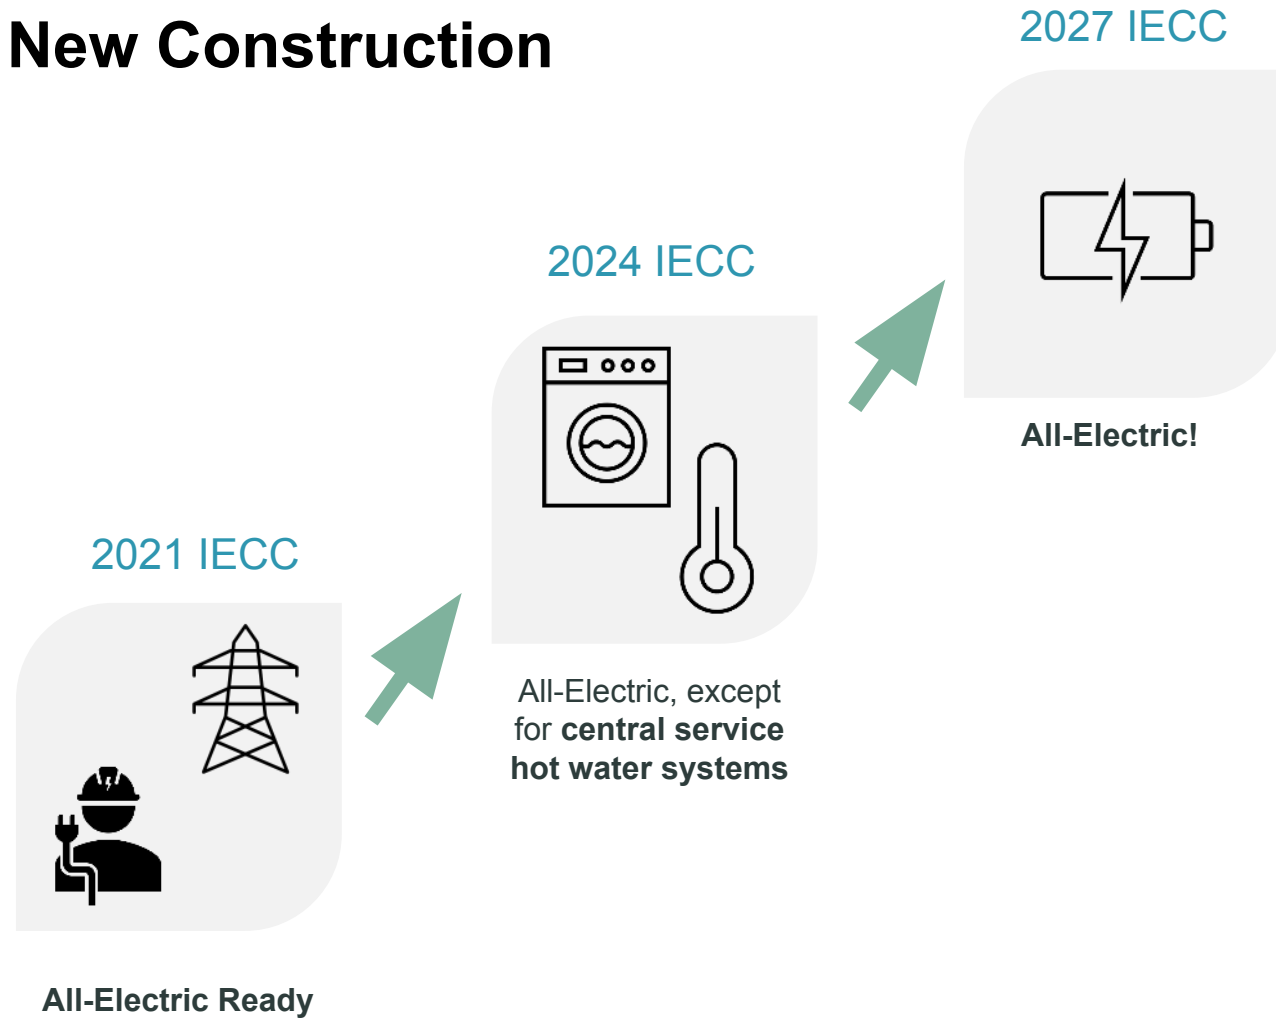

New Cooling in Schools with Hydronic Heating

- **Heating:** Hydronic devices - unit ventilators, convectors, fin tube radiators, AHU coils, etc.
- **New cooling:** Typically add an air cooled chiller piped to unit ventilators and other devices
- Evaluating air source **heat pumps** - pipe into the heating water and new chilled water systems
 - Current heat pumps produce lower temp hot water (i.e. 130 deg F vs. 180 deg F) - keep boiler for colder temps
 - More complex design and control
 - Evaluate options as technology improves

New Construction

- Denver code will require all electric in a few years
 - Amendment has been proposed for 2022
- More system options are available with new construction (VRF)
- More efficient envelope helps support all electric

Renewable Energy

Renewable Energy

Goal - 100% Renewable by 2030

- Xcel Energy ~80% renewable by 2030, existing PV at DPS covering ~7% of energy = **13% gap**
- To cover the gap at current electricity levels, approximately:
 - **9,400 kW** of solar PV
 - **659,000 sq.ft.** of solar PV, roughly 4% of building area
 - **\$18.8 million first cost** (at \$2/watt; cost will vary)

Other changes will impact the gap to achieve 100% renewable electricity
